

# THE FORTRESS SOLUTION

## For Operational Technology Risk

- **Technology**
- **Analytics**
- **Services**

**The Fortress Solution delivers holistic visibility into emerging risks throughout your connected asset ecosystem. It's a tool-agnostic platform converging three complementary solutions for Third Party Vendor Risk Management (TPRM), Vulnerability Risk Management (VRM) and Operational Technology Risk (OTR).**

Here is a closer look at how the OTR component of the Fortress Solution supports your organization.

### The Challenge

As companies increasingly rely on digitization, their emerging cyber risk exposure spikes exponentially around a growing ecosystem of connected assets. The stakes are highest in Operational Technology settings, where the cost of failure goes beyond just data or profitability — OT breakdowns can cost lives or create major business, or even major societal, disruptions. Rigorous uptime demands and embedded IoT systems pose extra challenges for digital security and risk management.

### The Fortress Approach on OTR

Fortress security architects are experts in Operational Technologies that feature high demands around resilience, regulation and five nines reliability. You can't be a generalist when your job is to manage emerging risks that impact specific industries in unique ways. That's why Fortress team members are top leaders in both cyber security and the mission-critical industries where cyber security matters most. The Fortress OTR Solution delivers the power and expertise for holistic visibility across complex, purpose-built critical infrastructure ecosystems.

### Risk Management Built for the Demanding World of OT

Because the Fortress OT solution is technology agnostic, it integrates via API with all the major OT security vendors to guard against OT risks with powerful capabilities, including:

OT Security Monitoring	Continuous Monitoring
OT Process Automation (workflows, business rules & other)	Vulnerability Incident Response
Supply Chain Security	Threat & Attack Surface Modeling
Real-time Reporting	OT Security Risk Management
Vendor Assessments	Findings Management
Remediation	Reporting & Analytics
Contract Review	Improved coordination & collaboration with external teams
Compliance Reporting	Governance

### Advisory and Managed Services

Fortress experts understand that IT-centric strategies are doomed to fail in critical infrastructure settings, and our advisory services deliver gap analysis and other project-oriented consulting tailored specifically for the demanding world of OT and critical infrastructure. Our team members have advanced, industry-specific credentials in critical infrastructure, energy, manufacturing, land and sea transportation logistics, healthcare, military and government.

Once we implement your solution, a powerful suite of OTR managed services supports day-to-day identification and mitigation of risk in embedded systems, IIoT and other common OT components.

### Talk to Fortress Today

Contact Fortress for new levels of visibility and actionable insights on managing organizational vulnerabilities so you can get a unified view of all assets and risks — prioritized for better clarity, speed and insight as you analyze, correlate and erase vulnerabilities and risks across your entire digital ecosystem.
