

THE FORTRESS SOLUTION

For Vulnerability Risk Management

- **Technology**
- **Analytics**
- **Services**

The Fortress Solution delivers holistic visibility into emerging risks throughout your connected asset ecosystem. It's a tool-agnostic platform converging three complementary solutions for Third Party Vendor Risk Management (TPRM), Vulnerability Risk Management (VRM) and Operational Technology Risk (OTR).

Here is a closer look at how the VRM component of the Fortress Solution supports your organization.

The Challenge

While many organizations already implement vulnerability scanner tools, most of these tools lack holistic visibility across lines of business or asset types. Such solutions are of little use without a way to prioritize reported vulnerabilities and integrate with existing work management or ticketing mechanisms.

The Fortress Approach to VRM

Fortress customers find value in our VRM solution's ability to coordinate vulnerability management among key stakeholders – application developers, application owners, business owners and security teams – so that VRM activity maps to security objectives that are critically important for the business without disrupting core operational goals.

A Powerful VRM Solution

The Fortress VRM solution provides insights into the biggest security concerns within our customer environments. Our powerful suite of capabilities addresses a wide range of VRM needs, including:

Asset Management	Reduction in time or resource cost to resolve vulnerabilities
Asset Classification	Improved coordination and collaboration with external teams
Vulnerability visibility across disparate technologies and environments	Compliance Reporting
Vulnerability Prioritization	Maturing vulnerability management beyond scanning
Workflow Automation	Effective VRM Reporting

Advisory and Managed Services

The Fortress VRM solution is backed by industry and technology-centric expert advisory services to quickly customize implementations, conduct gap analysis and cover additional project-oriented consulting needs. Our team members hold advanced certifications in areas like cyber security, governance, third party risk management, accounting, law and finance — so you get top experts on the case as you mitigate risk and accelerate business operations.

Managed services optimize ongoing operations by coordinating robust protections for affected assets — including patch management, system optimization, governance and vulnerability incident response. Across the board, we reduce risk of security events and compliance risks, all while supporting operational demands for maximum uptime.

The Fortress team is made up of experts in the critical fields where emerging cyber risks pose the greatest threat. It's a level of expertise and experience that's exceedingly hard for companies to build on their own. That's why Fortress delivers a powerful, turnkey solution that enables clients to buy versus build. We bring speed and certainty to your cyber defenses and help you avoid the workforce headaches of finding and retaining human capital.

Talk to Fortress Today

Contact Fortress for new levels of visibility and actionable insights on managing organizational vulnerabilities so you can get a unified view of all assets and risks — prioritized for better clarity, speed and insight as you analyze, correlate and address vulnerabilities and risks across your entire digital ecosystem.
